MovU Vehicle Radar

IP65 radar made of polycarbonate with aluminium bracket to be mounted at 3 to 5m height on any hollow column, to be combined with IP66 LED luminaires programmed in corridor mode to detect vehicles above 4km/h at up to 150m distance. Compatible with pilot wire, RF or PL installations. In pilot wire mode a retriggerable staircase timer (96271077) is needed in the distribution cabinet. The built-in red LED lights up when presence is detected. Speed limit detection (4 to 90km/h) and incoming direction can be set on site by rotary and DIP switches.
